ART UNIT	PAPER NUMBER
2131	8

DATE MAILED: 06/17/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

	Application No.	Applicant(s)
Office Action Summary	09/707,417	BJORN, VANCE C.
	Examiner	Art Unit	
	Aravind K Moorthy	2131	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>*05 April 2004*</u>.

2a)☒ This action is **FINAL**.   2b)☐ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) *1-31* is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) *1-31* is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☒ The drawing(s) filed on *06 November 2000* is/are: a)☒ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☐ All   b)☐ Some * c)☐ None of:

      1.☐ Certified copies of the priority documents have been received.

      2.☐ Certified copies of the priority documents have been received in Application No. _____.

      3.☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)

2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) Paper No(s)/Mail Date *7*.

4) ☐ Interview Summary (PTO-413) Paper No(s)/Mail Date. _____ .

5) ☐ Notice of Informal Patent Application (PTO-152)

6) ☐ Other: _____.

DETAILED ACTION

1. Claims 1-31 are pending in the application.

2. Claims 1-31 stand being rejected.

Response to Arguments

3. Applicant's arguments with respect to claims 1-31 have been considered but are moot

in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act

of 1999 (AIPA) and the Intellectual Property and High Technology Technical

Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting

directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior

to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1, 5, 6, 8, 9, 11-14, 17, 23, 24, 26, 27 and 29-31 are rejected under 35

U.S.C. 102(e) as being anticipated by Cuccia et al U.S. Patent No. 6,151,676.

As to claims 1, 14 and 17, Cuccia et al discloses receiving a record ID for a user.

Cuccia et al discloses a one-time key generated by the server and encrypted with a user's

public key by the server. Cuccia et al discloses receiving the user's authentication data

from the client. Cuccia et al discloses determining if the user's authentication data matches the record ID. Cuccia et al discloses decrypting the one-time key with the user's private key, and returning the decrypted one-time key to the client [column 6, lines 13-49].

As to claims 5 and 23, Cuccia et al suggests a web page presented by the server to the client prompts the user to enter the authentication data to log in to the server [column 9, lines 26-42].

As to claims 6 and 24, Cuccia et al discloses that the client's authentication data is automatically redirected to the authentication server [column 6 line 64 to column 7 line 18].

As to claims 8 and 26, Cuccia et al discloses that the authentication data is personal data selected from among the following: a password, a smart card, and another type of authentication card [column 6, lines 6-12].

As to claims 9 and 27, Cuccia et al discloses that the client forwards the decrypted one-time key to the server, thereby authenticating the user as the owner of the private key [column 7, lines 19-59].

As to claims 11 and 29, Cuccia et al discloses that the record ID and the encrypted one-tune key are further encrypted using a partner key. Cuccia et al discloses decrypting the record ID and encrypted one-time key using the partner key [column 10, lines 15-55].

As to claims 12 and 30, Cuccia et al discloses that the partner key is a symmetric key set up during registration of the partner [column 6, lines 6-12].

As to claims 13 and 31, Cuccia et al discloses that the partner key is a private key of the authentication server [column 9, lines 13-42].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. **Claims 2-4 and 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cuccia et al U.S. Patent No. 6,151,676 as applied to claim 1 above, and further in view of Smith et al U.S. Patent No. 6,233,685 B1.**

As to claims 2 and 20, Cuccia et al teaches receiving a registration authentication

data from the user, as discussed above.

Cuccia et al does not teach generating a random public key/private key pair for

the user. Cuccia et al does not teach generating a random record ID for the user. Cuccia

et al does not teach associating the authentication data and the private key with the record

ID.

Smith et al teaches generating a random public key/private key pair for the user

[column 5, lines 34-46]. Smith et al teaches generating a random record ID for the user.

Smith et al teaches associating the authentication data and the private key with the record

ID [column 8 line 66 to column 9 line 19].

Therefore, it would have been obvious to a person having ordinary skill in the art

at the time the invention was made to have modified Cuccia et al so that the user's

public/private key pair would have been generated randomly by the server. The server

would have generated a record ID for the user randomly. The authentication data and the

private key would have been associated with the record ID.

It would have been obvious to a person having ordinary skill in the art at the time

the invention was made to have modified Cuccia et al by the teaching of Smith et al

because it minimizes risk of compromised factory machines, activating tamper response

at a point of trust (certifying authority) to protect against attacks, and/or continually

certifying the untampered state of the device along shipping channels and at user sites,

and/or allowing for all keys to be regenerated so that in accordance with sound

cryptographic practice there is no need to depend on permanent keys [column 2, lines

45-56].

As to claims 3 and 21, Cuccia et al teaches sending the record ID and the public

key to the user [column 11, lines 28-35].

As to claims 4 and 22, Cuccia et al teaches establishing a secure connection with

the user, prior to receiving registration authentication data [column 6, lines 13-29].

**6. Claims 7, 10, 25 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable
over Cuccia et al U.S. Patent No. 6,151,676 as applied to claim 1 above, and further
in view of Byford U.S. Patent No. 6,581,161 B1.**

As to claims 7, 10, 25 and 18, Cuccia et al teaches that the authentication data is

biometric data [abstract].

Cuccia et al does not teach discarding the record ID after returning the one-time

key to the user.

Byford teaches authentication data being biometric data [column 4 lines 44-58].

Byford teaches discarding a user's record ID [column 2, lines 39-42].

Therefore, it would have been obvious to a person having ordinary skill in the art

at the time the invention was made to have modified Cuccia et al so that the

authentication data was biometric data and the user's record ID would have been discarded.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cuccia et al by the teaching of Smith et al because it removes the need for encoded badges, static passwords and the like, and also removes the need for users to present themselves at a particular location, such as a security control office, before they can be granted access rights to a facility [column 4, lines 59-67].

7.   Claims 15, 16, 18 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cuccia et al U.S. Patent No. 6,151,676 as applied to claims 14 and 17 above, and further in view of Towers et al U.S. Patent No. 5,692,106.

As to claims 15, 16 and 18, Cuccia et al does not teach determining an authentication policy associated with the user. Cuccia et al does not teach verifying that the authentication policy has been satisfied, prior to permitting access to the server. Cuccia et al does not teach determining if the server should verify additional data. Cuccia et al does not teach requesting additional data from the user prior to generating the onetime key.

Towers et al teaches determining an authentication policy associated with the user [column 13, lines 31-48]. Towers et al teaches verifying that the authentication policy has been satisfied, prior to permitting access to the server [column 13, lines 31-48]. Towers et al teaches determining if the server should verify additional data [column 1, lines 36-63]. Towers et al teaches requesting additional data from the user prior to generating the one-time key [column 1, lines 36-63].

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cuccia et al so that an authentication policy associated with the user was verified prior to permitting access to the server. Should additional user information was needed; it would have been requested prior to generating the one-time key.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cuccia et al by the teaching of Smith et al because the examiner asserts that authentication policies restrict what a user can do on a server site and requesting additional data further authenticates a user prior to accessing a server's site.

As to claim 21, Cuccia et al teaches that the interface sends the record ID and the public key to the user, as discussed above.

8. Claims 19 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cuccia et al U.S. Patent No. 6,151,676 as applied to claim 17 above, and further in view of Mao U.S. Patent No. 6,119,227.

As to claim 19, Cuccia et al does not teach nonce generation logic to generate a nonce. Cuccia et al does not teach that the nonce is to be included with the user authentication data from the client. Cuccia et al does not teach comparison logic to verify that the user authentication data includes the appropriate nonce.

Mao teaches nonce generation logic to generate a nonce [column 5, lines 13-29]. Mao teaches that that the nonce is to be included with the user authentication data from the client [column 5, lines 30-51]. Mao teaches comparison logic to verify that the user authentication data includes the appropriate nonce [column 5, lines 30-51].

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cuccia et al so that there was nonce generation logic to generate a nonce. The nonce is would have been included with the user authentication data from the client. Comparison logic would have been used to verify that the user authentication data includes the appropriate nonce.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Cuccia et al by the teaching of Mao because it provides a method for authenticating a user's requests and messages [column 1, lines 49-67]

As to claim 22, Cuccia et al teaches that interface establish a secure connection with the user, prior to receiving registration authentication data, as discussed above.

Conclusion

9.   Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL.** See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the
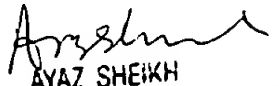

advisory action. In no event, however, will the statutory period for reply expire later than

SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Aravind K Moorthy whose telephone number is 703-305-

1373. The examiner can normally be reached on Monday-Friday, 8:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Ayaz R Sheikh can be reached on 703-305-9648. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR. Status

information for unpublished applications is available through Private PAIR only. For

more information about the PAIR system, see http://pair-direct.uspto.gov. Should you

have questions on access to the Private PAIR system, contact the Electronic Business

Center (EBC) at 866-217-9197 (toll-free).
